

DATA SHEET

APIXEL Comet

Learning Management System

Comet is a software package that enables the management and delivery of online content to users (learners). It is web-based to facilitate "anytime, any place, any pace" access to learning content and administration.

It allows for user registration, delivery of Metamorphosis ASP published lessons, user assessment, and provides extensive reporting in an online environment. It does not include features such as skills-gap analysis, succession planning, professional certification, and resource allocation (venues, rooms, textbooks, instructors, etc.) nor is it SCORM compliant.

The focus of Comet is to manage users, keeping track of their progress and performance across all courses. It performs heavy-duty administrative tasks, such as reporting but doesn't create course content and it does allow for some end user customization of the interface.

A Comet course can also include links to other web-based content such as MS PowerPoint and Adobe Acrobat files.

Comet reduces administration and provides simplicity and ease of use not typically found in full-scale LMS systems.

System Requirements

A web server capable of running ASP 3.0 (classic ASP) pages with JScript as the scripting language (for example MS Internet Information Services – IIS)

Jet OLE DB Provider and ADO drivers for Microsoft Access 2000+ database

1024 x 768 pixel display

ASP content developed with APIXEL Metamorphosis

Read/Write permission to some of Comet's folders
