

DATA SHEET

FastTrack for PowerPoint™

FastTrack automatically creates PowerPoint™ presentations. FastTrack imports a Microsoft Word document, splits it into slides and inserts graphics from its library.

FastTrack

Publishes Word doc.s to PowerPoint. The resulting presentation may be further edited within PowerPoint itself.

Customisation

Ten common template designs from which to choose.

Select the font, colour, and style to use for the main body text.

Automation

Once settings selection is complete FastTrack will generate a complete PowerPoint presentation without any further user input.

It will use images from within the Word document and/or from its graphics library.

HTML

FastTrack can also publish to standards compliant HTML files that use style sheets (CSS) and JavaScript to manage navigation. The HTML files are viewable on any modern browser. It has only a small subset of the features of APIXEL Metamorphosis.

System Requirements

At least 600 MHz Intel® Pentium™ III processor (or equivalent)

Windows® 2000, Windows® XP

256MB RAM

1024 x 768 pixel, 16-bit display (32-bit recommended)

150MB available hard disk space (700MB necessary if graphics library is installed)

Microsoft Word 2000 or higher

Microsoft PowerPoint 2000 or higher (if publishing to PowerPoint)
